MONEYVIEW

INTRODUCTION

India now goes by the slogan “Banking on our fingertips”. The key to creating a financial product which emanates delight on our fingertips is a fine amalgamation of an empathetic and intuitive user experience.

Creating an intuitive user experience comes from a deep understanding of the user's needs and emotions. This brings us to the question, “What user needs do we solve for when it comes to a banking product for Indians”. In order for us to answer this question, we need to first understand the prevalent cultural practices when in financial management.

The advent of the internet has brought about a fast digitisation of services. As per DataReportal, there were 751.5 million internet users in India at the start of 2024, when internet penetration stood at 52.4 percent. India was home to 462.0 million social media users in January 2024, equating to 32.2 percent. A total of 1.12 billion cellular mobile connections were active in India in early 2024, with this figure equivalent to 78.0 percent of the total population.

More than half of India's population, as we can see, has access to the internet. This number creates the perception that Indians are open and adept with digital products. However, the advent of the technology comes with a cloudburst of various digital products and services.

So, how do we make our product stand out from others? What is it that we are doing differently and why should the users choose us? The answer lies in the unique user experience that we provide to our customers.

The key to creating an intuitive, accessible and delightful user experience is through communication design. We need to empathise with the user's emotions, in order to create a product experience that suits their needs which in turn leads to satisfaction, happiness and excitement for the user.

So, it's the story that we tell our users which makes our product stand out, thus making a mark in the lives of the digitally-evolving Indians.

CONTENT STRATEGY

What is a Content Strategy?

Content strategy is the process of empathising with user's emotions to understand their needs. This is followed by communicating with them in a tone which helps elevate the positive emotions and ease the negative emotions.

Step-by-step Process to Create a Content Strategy

Step 1: Empathise with the User's Emotions

We at Moneyview aim towards creating an intuitive and effortless experience driven by content, which captures and responds to the various emotions faced by our users at different stages of their digital journey.

We begin by creating a user story for our users so that we can understand the stage in which the user is at and the possible activities that the user is carrying out at that point.

When the user	The user wants to	So that the user can

Figure 1: This table enables us to determine the user's intentions, thus helping us understand how we can assist them at that particular stage so as to help them complete the task or move to the next stage.

The next step is to capture the users emotions by creating an empathy map as given below:

What is the user doing?	What is the user thinking?	What is the user feeling?

Figure 2: Based on what the user is doing, here we interpret the emotions that the user feels, so that we can create an experience for them to bring out the desired results and emotions.

Step 2: Map Emotions with Tone of Voice

Empathising with the user's state of mind allows us to understand the emotions that they go through under diverse circumstances. Once these emotions have been jotted down, we identify the different product characteristics that will come into play to solve for the user's needs and emotions. After we have identified the product personality, we can map the tone of voice required to communicate with our users to either alter or enhance their emotions.

In order to create a tone of voice, we need to understand the personality of Moneyview, so that we can communicate as a companion. The ultimate objective is to inform, educate, assist and motivate users to carry out tasks and enjoy their experience on Moneyview.

MONEYVIEW'S PERSONALITY

Friendly

We greet our users warmly and make them feel welcome and comfortable. We use a conversational tone, avoid jargon, and present information in an easy-to-understand way. We also speak in a polite tone while keeping it conversational.

Trustworthy

We consistently provide accurate and reliable information, ensuring transparency in all transactions and communications. We are partnered with trustworthy banks and services and keep users informed about the proceedings of their actions on our platform.

Empathetic

We show understanding and compassion towards our users' emotions and needs. We offer personalised solutions, recognizing that every user's financial journey is unique. We also help them out throughout their journey on our platform.

Knowledgeable

We demonstrate expertise in our financial services, providing users with the value propositions which best suit their needs. We educate our users on the trending financial products and best practices, empowering them to make informed decisions.

Helpful

We actively assist users in achieving their financial goals by offering practical tools, resources, and personalised recommendations. We anticipate our users' needs and provide timely support and solutions.

Supportive

We support and encourage our users when they are satisfied and happy with our product. We nurture the user's positive emotions and engage them with more features and services.

Based on the various emotions that our users go through, we can broadly identify the emotions as given below. In order to address the emotions of the users, we need to speak to the users in a particular tone which will help elevate or ease the particular emotion.

Step 3: Follow the Basic Writing Principles

Keep it simple and crisp

We always keep our language simple and easy to understand. Jargons and unclear explanations of concepts and situations can cause confusion and anxiety amongst users.

Don't:

Instructions:

 Ensure your **internet connection** is stable

 Make sure your face is clearly visible in the **video frame**

Do:

In the next steps, make sure:

 You have a stable **internet**

 Your face is clear in the **video**

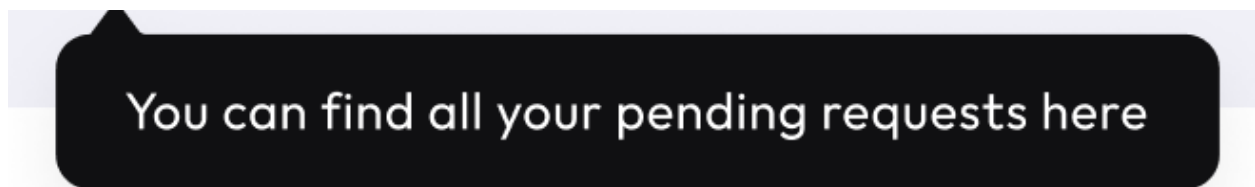

Use active voice

Communicating in an active voice makes the information clear and direct. It also makes us sound like confident experts who guide users towards taking particular actions.

Don't:

Do:

Write in a conversational manner

In order to bridge the gap between machine and human, it becomes essential for us to speak in a conversational tone. This also makes the platform friendly and accessible.

Don't:

You haven't paused any autopay yet

TONE OF VOICE

Guiding

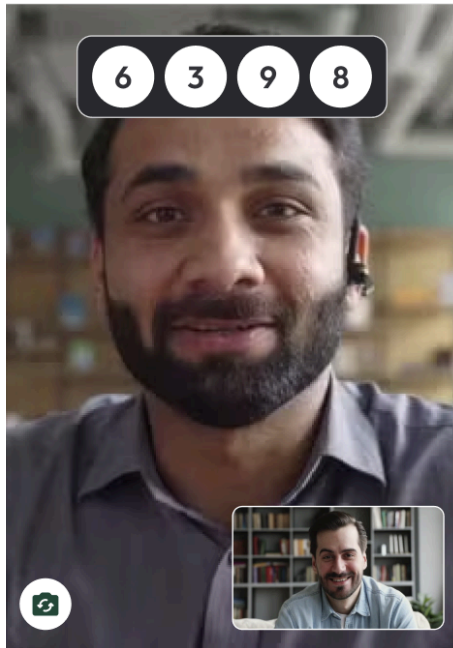

We should provide direction, assistance, and support throughout their interactions with Moneyview. We also offer reassurance, making users feel understood and valued. In case of challenges, we guide them out of it and provide impactful solutions.

Don't:

Verify code

Do:

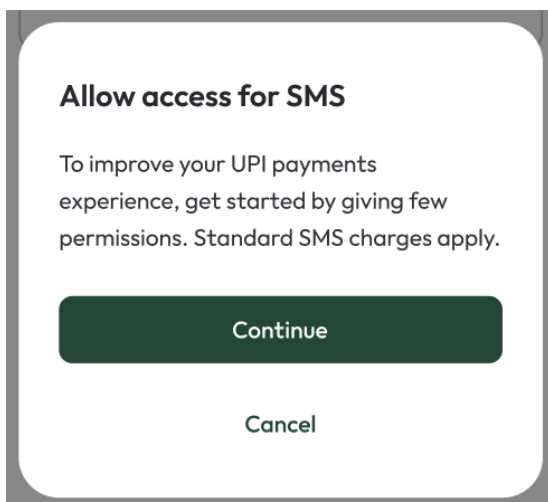

Read aloud the 4 digit code displayed on your screen

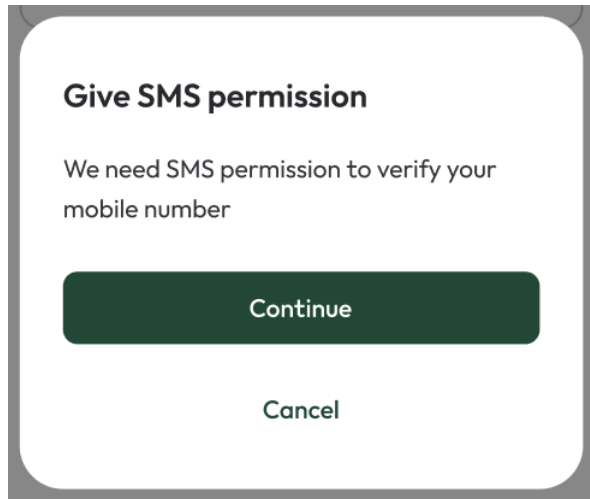

Transparent

We should provide the relevant and required information to our users so that they can get clarity regarding a certain situation. This also motivates them to take actions and complete journeys with confidence.

Don't:

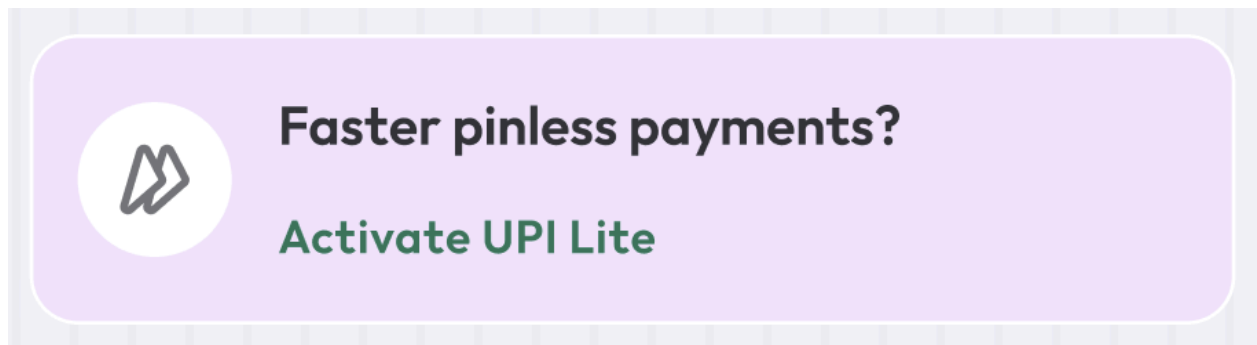

Do:

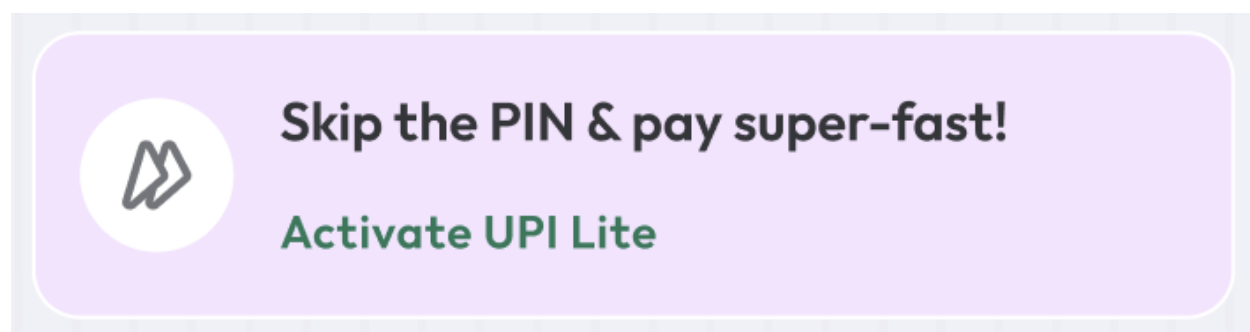

Encouraging

We motivate and encourage users, particularly when they might be facing challenges. We also nudge them to complete their journeys or take a particular action for us to achieve our business and user goals.

RULES OF CAPITALISATION

Headers & Sub-headers

Since, headers communicate the primary message, we highlight them visually to create emphasis. With sub-headers being the secondary mode of communication which adds onto the header, we keep them subtle. Both are in **sentence case** to avoid clutter and enable ease of reading.

Call to Action Buttons

CTAs which are of utmost importance as they enable the user to proceed to the next step or carry out a desired action which works both in favour of the user and the organisation. The CTA buttons are always in the **sentence case**.

Links

For clickable texts which lead to an action, just like that of CTA buttons, we use **sentence case**. These links are usually added as a secondary call to action or as addition to a primary communication.

Input Fields

Input field texts are in sentence case due to their directional nature and the focus should lie primarily on the fields that need to be filled by the user. Input fields are also in the **sentence case**.

Announcements and Reminders

The first message on announcements and reminders is meant to draw the attention of the user to read further. Hence, we highlight them. For the message followed after, it will be subtle visually. Both will be in **sentence case**.

Feature/Product Names & Bank Names

All names, feature names and bank names will be in **title case** so that they stand out. This also helps users in associating certain features/products and banks with Moneyview.

TIME, DATE, DAY & YEAR FORMATS

Examples:

12 Jul '24 | Tue, 12:20PM

09 May 11AM - 12 Jun, 11AM | '24 (All details needs to be shown)

19 - 21 May '24, 11AM (When the time and month is same for both months and time)

For date of birth, we will use the full form for year,

Example:

01 Nov 1989

We use abbreviations for days and months

Days: Mon, Tue, Wed, Thu, Fri, Sat and Sun

Months: Jan, Feb, Mar, Apr, May, Jun, Jul, Aug, Sept, Oct, Nov and Dec
